

AI Chatbot Assistant

The AI Chatbot Assistant enables users to interact with the system using natural language queries. It understands user requests and provides quick, accurate, and user-friendly responses related to government schemes and services.

Input:

- User query in natural language.

Process:

- Analyze and understand the user's intent.
- Retrieve relevant information from the system.
- Generate clear and human-friendly responses.

Output:

- Instant answers to user questions.
- Step-by-step application guidance.
- Comparison of different schemes based on eligibility, benefits, and requirements.
- Summary of benefits and recommendations tailored to the user's needs.

Benefits:

- Reduces the time required to search for information manually.
- Improves accessibility and user experience.
- Provides personalized assistance 24/7.
