

Bridging the Digital Gap - Real Student Voices

Student Interaction Report

Student Type:

1. Class 8 Government School Student
2. Class 9 Private School Student

Questions Asked During Conversation

1. Do you have a smartphone or laptop for learning?
2. What subject feels most difficult and why?
3. What makes classroom learning boring?
4. Do you feel comfortable asking doubts?
5. What type of learning do you enjoy most?
6. What problems do you face during online learning?

Top 5 Real Insights

Student 1 (Government School)

- Shares one mobile phone with siblings
- English lessons are difficult to understand
- Feels shy to ask doubts in class
- Likes science videos and visual explanations
- Internet connection is poor in village area

Student 2 (Private School)

- Uses mobile mostly for homework and YouTube learning
- Gets distracted during online classes
- Finds long lectures boring
- Understands better through quizzes and animations
- Wants more practical and activity-based learning

Pain Point Identified

Students struggle to learn effectively because lessons are mostly theory-based, difficult to understand, and lack engaging digital or visual support.

Redefined HMW Statements

1. How might we make difficult subjects easier using visual and interactive learning?
2. How might we help students learn confidently even without personal digital devices?
3. How might we create fun classroom experiences that encourage students to ask doubts freely?

Observation Note

Both students showed more interest when talking about videos, games, quizzes, and practical learning compared to normal classroom lectures.
